- Introduction of JBP activities
- Introduction of bosai solutions of our 100+ member companies/organizations

PR Point

Japan Bosai Platform, JBP is an association of Japanese private companies with leading bosai solutions. Our goal is to make society disaster resilient and sustainable by sharing Japanese bosai solutions with the world.

JBP is the focal point of disaster risk reduction (DRR) technology in Japan. We are founded on strong support from and collaboration with the Japanese government, academia and the private sector.

JBP's strength lies in the cooperation and wide-ranging technologies of its more than 100 member companies and organizations. Unlike a private company, our neutrality enables us to respond rapidly with optimized solutions. We are helping countries around the world to invest before disasters to save lives and strengthen their economies.
